291 accounts discovered (200 LDAP, 91 Linux)	**78** privileged accounts	**58 / 58** vaulted / planned for onboarding (100%)	**40** privileged accounts vaulted
27 stale accounts (10 still privileged)	**36 + 13** remediation + review items	**5 / 1** warning / critical alerts	**0** unresolved critical alerts

Master Policy compliance

Check	Result
File audit device enabled	**PASS**
Every vaulted account carries an approval bound to the current plan	**PASS**
No self-approval (approver differs from plan author)	**PASS**
Every platform rotates within 90 days	**PASS**
Every vaulted account changed within its platform period	**PASS**
Every vaulted account verified successfully in the last 24h	**PASS**
Onboarder and auditor policies grant no credential read	**PASS**
Every safe has member and manager policies	**PASS**

Master Policy: rotation at most every 90 days; approval required: True; self-approval allowed: False; verify after change: True.

Classification accuracy (against seeded ground truth)

hybrid (stale rules + gradient boosting); 239 labeled accounts, 5-fold stratified cross-validation, out-of-fold predictions. Synthetic lab data: these numbers describe separation of the generator's personas, not real-world accuracy.

Control mapping (indicative)

Control	Topic	Evidence in this pipeline
NIST 800-53 AC-2	Account management	Unified inventory of directory and local accounts; owners and teams
NIST 800-53 AC-2(3)	Disable accounts	Stale accounts detected with evidence; remediation list
NIST 800-53 AC-6	Least privilege	Per-safe policies; members vs managers; pipeline split into 3 AppRoles
NIST 800-53 AC-6(5)	Privileged accounts	Privileged accounts vaulted with approval records
NIST 800-53 IA-5(1)	Password-based authentication	Vault password policies, scheduled rotation, verification
NIST 800-53 AU-2 / AU-12	Event logging	Vault file audit device + CPM activity log
NIST 800-53 AU-6	Audit review	Credential-access table derived from the Vault audit log
